

Wagner School: Math Assessment Answer Key and Reference Sheet

No.	Question	Answer	Reference to Review Topics
1	$\frac{1}{10} - \frac{1}{12} =$	$\frac{1}{60}$	Fractions
2	$\frac{1}{2} * (\frac{1}{3} - \frac{1}{6}) =$	$\frac{1}{12}$	Fractions
3	$\frac{2/3}{4/5} =$	$\frac{5}{6}$	Fractions
4	What is 12% of 85?	10.2	Percents
5	20% of 15 is what % of 24?	12.5%	Percents
6	The rate of inflation in 1994 was .026. How would this be expressed as a percent?	2.6%	Percents
7	A student earned \$2000 working at a summer job before entering college. The following summer, the student earned \$2525. What percent increase did the student's earning grow from one summer to the next?	26.25%	Percents
8	Tamara just received an 8% pay raise, which amounts to a \$2,000 increase in her annual salary. Martin was earning \$23,000 a year and just heard that as of next week, he will be making \$24,500 a year. How much was Tamara making before her raise? Who received a greater percent increase in annual salary, Martin or Tamara?	\$25,000; Martin received a 6.5% increase, therefore Tamara received a greater percent increase in salary (by 1.5%)	Percents
9	In the Big Bucks Lottery, the chance of winning a \$10 prize is 1%. How many people do you expect would win a \$10 prize if 1000 people each buy a single ticket to Big Bucks?	10	Percents

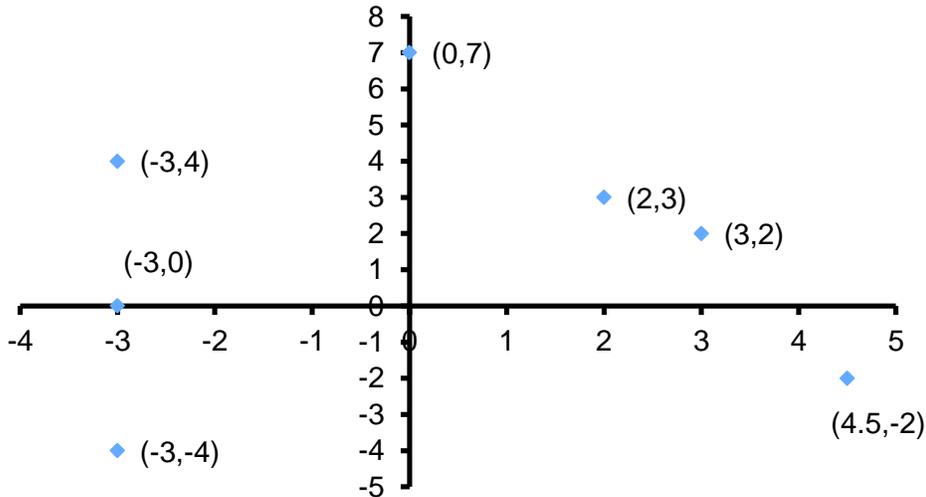

No.	Question	Answer	Reference to Review Topics
10	Suppose we want to compare the miles per gallon ratio of two cars. Our car traveled 120 miles on 4 gallons of gas. We find that our neighbor's car traveled 210 miles and used 6 gallons of gas. Which car gets the best gas mileage?	Neighbor's car gets better gas mileage (35 miles/gallon), whereas our car gets 30 miles/gallon.	Ratios
11	50 is what proportion of 200?	$\frac{1}{4}$ or 0.25	Proportions
12	Suppose you go to the store and purchase a 5-pound bag of peanuts for \$2.10. Assuming that the price per pound doesn't change, how much will a 7-pound bag of peanuts cost?	\$2.94	Proportions
13	Plot and label the following points in the axes given below: (a) (2, 3) (b) (3, 2) (c) (4.5, -2) (d) (-3, -4) (e) (-3, 4) (f) (0, 7) (g) (-3, 0)	See below	Graphing
14	What is the slope of the line with the equation $2y - x = 3$?	$\frac{1}{2}$	Graphing
15	What is the equation of the line through the points (1, 5) and (3, -3)?	$y = -4x + 9$	Graphing
16	Point A is (4, 1) and Point B is (2, 5). What is the slope of the line that connects these two points?	-2	Graphing
17	Which letter represents the point (3, 2)?	V	Graphing
18	Write the ordered pair for point W.	(5,0)	Graphing
19	What is the equation of the line shown in the graph below?	$y = 10 + \frac{1}{5}x$	Graphing

No.	Question	Answer	Reference to Review Topics
20	Using the graph in question #37, is the slope of the line positive, negative, infinite, or zero?	Positive	Graphing
21	In the graph below, the line A shifts from its initial position of A_0 to its final position at A_1 . If initially the equation of line A_0 is $y = mx + b$, what must have changed in this equation for this sort of shift to occur, y , m , x , or b ?	m (slope)	Graphing
22	In the graph below, the line B shifts from its initial position of B_0 to its final position at B_1 . If initially the equation of line B_0 is $y = mx + b$, what must have changed in this equation for this sort of shift to occur, y , m , x , or b ?	b (y-intercept)	Graphing
23	Solve for x : $3x + 2 = 17$	$x = 5$	Algebra
24	Solve for x : $2(x + 7) = 3(3 - x) + 8$	$x = \frac{3}{5}$	Algebra:
25	Solve for x : $ax = b(x + d)$	$x = \frac{bd}{(a - b)}$	Algebra
26	Solve for x : $\frac{1}{3 + x} = \frac{1}{3x - 1}$	$x = 2$	Algebra
27	Solve for x : $y = 2x + 3$	$x = \frac{y - 3}{2}$	Algebra
28	Linda purchased X items from a company for \$8 each. The postage and handling charges for the first item is \$3, plus \$1 for each additional item. Write an algebraic expression which represents the total dollar amount of Linda's purchase, including postage and handling of X items.	$9x + 2$	Algebra

No.	Question	Answer	Reference to Review Topics
29	The value of a bag of coins consisting of nickels, dimes, and quarters is \$1.90. There are half as many quarters as nickels, and three more nickels than dimes. Write an algebraic expression representing this information, and solve for how many coins of each kind are in the bag.	$0.10x + 0.05(x + 3) + 0.25\left[\frac{1}{2}(x + 3)\right] = 1.90$ $x = 5$; therefore 5 dimes, 8 nickels, and 4 quarters are in the bag	Algebra
30	Use the following system of equations to solve for x and y: $y - 3x = 5$ and $y + x = 3$	$x = -\frac{1}{2}$ $y = 3\frac{1}{2}$	Algebra

(13) Plot and label the following points in the axes given below:

- (a) (2, 3) (b) (3, 2) (c) (4.5, -2) (d) (-3, -4) (e) (-3, 4)
 (f) (0, 7) (g) (-3, 0)
