Estimating Impacts in Policy Research (PADM-GP 2875)

This course covers selected analytic and design issues that are relevant to policy research and program evaluation. It applies and extends skills that are developed in other courses offered at the Wagner School. For example, the concepts of experimental and quasi-experimental design that are introduced in Program Evaluation and Analysis (PADM-GP.2171) are applied in understanding and critiquing research reports, and in analyzing data. Multivariate analytic skills introduced in Statistical Data Analysis: Multiple Regression (PADM-GP.2902) are extended to various types of research designs and analytic situations.

Your goals in this course should be to:

- extend your familiarity with methodologic issues in policy research, including study designs, analytic approaches, and ethical issues.
- enrich your professional vocabulary. Understand and learn to use terms from program evaluation, econometrics and epidemiology.
- get hands-on experience in analyzing and presenting data, including managing data, selecting appropriate analyses, interpreting computer output, and presenting your findings in writing and in tables.
- improve your skills in reading, understanding, and reporting on journal articles.

The course is not a comprehensive or exhaustive review of the field of policy-relevant research or program evaluation. It is not a statistics course, nor is it a course in how to evaluate a program. The focus is on impact analysis (rather than process evaluation, performance monitoring, cost effectiveness analysis, or evaluation synthesis, all of which are covered in other Wagner courses). There is a substantial amount of data analysis both in and out of class. There is also a significant amount of new statistical material presented. All of this is done using real world examples, to solidify the base as you build your career as a practitioner and consumer of the research that informs public policy.
Course prerequisites (neither may be taken concurrently)

1. Program Evaluation and Analysis (PADM-GP 11.2171)
2. Statistical Data Analysis: Multiple Regression (PADM-GP 11.2902)

Skill prerequisites. Stata is used in this course, and I will assume that you are familiar with basic data analysis using that package. In addition, I will assume that you are capable with algebra at the pre-calculus level, are comfortable with algebraic notation, and understand the concept of a function.

Required purchases. There is no textbook for this course. Most of the course readings are available electronically through the Bobst library. A few are hardcopies on reserve at Bobst.

To supplement the required readings, you may want to use online sources or textbooks. Suggestions listed on the course website.

We will have several in-class labs using Stata. For those sessions, you should bring a laptop to class, or share with one of your classmates. If you do not yet have STATA installed on your computer, you need to rent or buy it. Consult the class website for instructions.

Class website. This is managed via NYU Classes. The website includes a number of resources, including our syllabus, scheduling information, datasets, assignments, videos, article links and other core course documents. The website will be also be used to communicate urgent matters such as assignment changes or glitches, class cancellations, and changes in office hours. You should check the site frequently.

Keeping up/missed classes. This course moves quickly. There is a lot of work! While the reading is important, there is a fair bit of informal in-class give-and-take. An effort is made to capture class work in handouts, but this is not always feasible. Students who miss a class should consult a partner student for copies of notes and handouts.

Preparation for class. So that we can use class time efficiently, I will post a number of resources and exercises for you to review before class. I will assume that you are prepared, and will collect some of the non-graded exercises (noting them as “complete” and “incomplete/missing”). For in-class discussions, I cold call on students, drawing on the non-graded assignments (as is done in law schools). Come to class prepared to contribute!

A note on journal articles. Articles used in the course are taken from journals representing an array of sectors and disciplines. You will find that there is great variation in emphasis, presentation, and statistical approaches across this array. Some articles are dense and complex, and may take hours for you to digest. Keep at it!
Reading journal articles is a skill that you can only learn by doing. I have tried to select articles that are accessible and not excessively technical. In some cases these are oldies-but-goodies. Don’t worry that the research findings may be obsolete. Your goal is to learn to read and think critically.

During class, we will discuss some of the articles in depth. Other articles will only be mentioned in passing. For the final exam in this advanced masters-level course, you will be expected to know all of the assigned articles at the level of an 11-points outline1. You will also be expected to have an understanding of the basic tables. To avoid being overwhelmed at final exam time, I suggest that you keep a running file of every journal article that you read, with a sentence or two for each of the 11 points.

**Getting help with assignments.** Most of the class assignments use Stata, and students often have questions. If/when you do, you can ask me, either during office hours or via email. I’m happy to take email questions at any time, and can respond efficiently if you ask your questions clearly, attaching as either a Word, .txt or .pdf any output, tables, etc. Please don’t send .smcl files. **Always** attach the relevant assignment sheet, so that I have it on hand to see what you’re working on – that saves me having to consult the course website.

Other options for getting help are: (a) to get help from the consultants at NYU ITS Data Service Studio (DSS) at Bobst (see website for details); or (b) to ask a fellow student. You’re welcome to work together on assignments, though each of you must do your own Stata runs, and write your own papers.

**Honor code.** The Wagner School [Honor Code](#) will be enforced. If you are unclear as to how the code applies to collaboration on assignments, or to any part of the course, please ask.

**Course grades will be based on:**

1. Assignment 1 (15%) Supplemental insurance and Medicare expenditures
2. Assignment 2 (5%) Estimates of impact with dichotomous data
3. Assignment 3 (15%) Impact of a mentoring program in New York City
4. Assignment 4 (15%) Enterprise zones and employment rates
5. Assignment 5 (10%) TBA
6. Final Examination (25% of grade)
7. Class preparation and participation (15% of grade)
   - This includes your readiness with non-graded assignments, some of which will be collected.

---

1 You may bring a one-sided handwritten 8.5 x 11 inch “cheat sheet” to the final exam.
TOPICS

To prepare:
- Take four hours to review your class notes and textbooks from Stat 1, Stat 2, and Program Analysis & Evaluation.
  - Pay attention to these terms: statistic, parameter, sample, population, estimation, confidence interval (aka “interval estimate”), sampling distribution, standard deviation, standard error (in general; specifically as it applies to means and differences of means), hypothesis test, p-value, OLS regression assumptions, coefficient, unbiased-ness, efficiency, “controlling for,” “holding constant,” impact, counterfactual.
  - Review the Stata analyses that you did in Stat 2.
- Review the 11 points document (posted under “Core course documents” on our website).

Week 2. February 5. Validity in social research. Internal validity, external validity, validity in measurement, conclusion validity (aka “statistical power”). Discussion of Newcomb paper.

To prepare:
- Take time to review basic study designs and threats to validity from Program Analysis and Evaluation. Pay special attention to internal validity, threats to internal validity (but not in great detail), external validity.
- Watch the course video on statistical power (link posted on our course website)
- Read “Measurement: Validity and Reliability,” a QMSS e-lesson. (url on course website).
- Complete The non-graded assignment posted on our course website

Week 3. February 12. In-class lab Preparation for Assignment 1

To prepare:
- Review bivariate statistics from Stat 1, by reading chapters 5 and 6 in the Wagner Way (posted under “Course documents”).
• Watch three course videos: these will acquaint you with some Stata maneuvers, and introduce you to bivariate analysis with Stata; see links posted on our website.
• Complete
  The non-graded assignment that goes with the videos; bring hardcopy to class.
• Bring your laptop to class.

Week 4. February 19. Cross sectional data. Logic of cross sectional designs. Thinking further about what it means to adjust for or hold constant. Further understanding of these terms: omitted variables bias, selection bias, endogeneity. General strategies and methods to minimize bias. Discussion of journal article.

To prepare:
• Review material on omitted variable bias from your Stat 2 text.
• Complete an “11-points” discussion of the Devaney et al. article.
• Work on Assignment 1, with the goal of completing your data analysis this week.

To prepare:
• Complete these non-graded assignments – make sure that your math skills are up to par by completing these class Blackboard postings. ** If you don’t get this, you won’t get what follows **
• “Review of percent change and percentage point change”
• “Review of logarithms” – note that you should perform a calculator check; bring your calculator to class.
• Read Stock JH, Watson MW. Introduction to Econometrics, Second edition, Chapter 11, “Regression with a binary dependent variable” (on reserve @ Bobst), and. Munnell A.H. et al. Mortgage lending in Boston: Interpreting the HMDA data. American Economic Review. 1996; 86(1): 25-53 – paying special attention to the tables, and then:
• Non-graded assignment: Prepare an 11-points discussion of the Munnell article.

ASSIGNMENT 1 due

To prepare:
- Re-read Stock and Watson’s Chapter 11 from last week, and review your class notes
- Complete the first non-graded assignment that is posted on Blackboard (“Probit practice”).
- Complete the second non-graded assignment that is posted on Blackboard (“Fourfold table”), and work the problems on pages 3 & 4.
- Read:
- Complete the non-graded assignment that is posted on our course website.
- Download and preview Assignment 2, and bring questions to class.

To prepare:
- Watch three course videos on interactions (URLs on course website). Bring your questions to class.
- Read
- Download and read Assignment 3, and bring it to class, along with your laptop + the dataset.

ASSIGNMENT 2 due

Spring break. March 19

To prepare:
- Read
  Albouy D. Program evaluation and the difference in difference estimator. Handout posted on our course website.
- Complete
  An 11 points discussion of the Torche paper, and the non-graded assignment on our course website.

To prepare:
- Read
  Stock JH, Watson MW. Introduction to Econometrics, Second edition, Chapter 10 (“Regression with panel data”); on reserve in Bobst, and
- Complete
  The non-graded assignment on our course website.

ASSIGNMENT 3 due
**Week 10. April 9. Panel data 2 (Practice).** Characteristics of panel data. Time fixed effects. Analysis with fixed effects – options in Stata.

To prepare:
- Reread from last week:
  *Chapter 10 of S & W, (“Regression with Panel Data”).
- Download and read Assignment 4 before coming to class.
- Bring your laptop to class.

**Week 11. April 16. The Regression Discontinuity (RD) and Instrumental Variables (IV) approaches.** The paradigm for classic RD: examining the data, analyzing the data. IV as “fuzzy” RD. Assumptions of instrumental variables analyses.

To prepare
- Read:
  *Trochim, W. “The regression discontinuity design” followed by “Regression discontinuity analysis” in the Research Methods Knowledge Base (URL on course website); and then
  *(Another reading, TBA), and
- Complete:
  The non-graded assignment on our course website.

**Week 12. April 23. Lab. Topic TBA.**

**ASSIGNMENT 4 DUE.**

To prepare:
- Readings and non-graded assignment TBA

• Read:
Buckley C. To test housing program, some are denied aid. NY Times. 12/9/2010, page A1

• Complete:
The non-graded assignment on our course website.

*****

Our final exam will be on Saturday, May 18th at 10 AM. Assignment 5 should submitted no later than that date as hardcopy, to Prof. Blustein’s box at Puck, or hand in at the final exam.
