

# **NYU FACULTY URBAN RESEARCH DAY**

**Thursday, May 4, 2017  
295 Lafayette Street, 2nd Floor**

# AGENDA

<u>Time</u>	<u>Location</u>	<u>Event</u>
2:00 - 2:10	Rudin	<b>Welcome &amp; Opening Remarks</b> <b>(Cybele Raver, Senior Vice Provost for Academic Analytics &amp; Graduate Academic Affairs)</b>
2:10 - 2:15	Rudin	<b>Explanation of Event Format</b> <b>(Sherry Glied, Dean, NYU Wagner)</b>
2:15 - 2:20	--	<b>Transition to Presentation Rooms</b>
2:20 - 3:20	Various Rooms (see page 2)	<b>Round 1: Concurrent Presentations</b>
3:20 - 3:35	--	<b>Break &amp; Transition to Presentation Rooms</b> <i>(Refreshments and snacks available in the lobby)</i>
3:35 - 4:35	Various Rooms (see page 2)	<b>Round 2: Concurrent Presentations</b>
4:35 - 4:45	Lobby	<b>Break &amp; Transition to Rudin</b>
4:45 - 5:00	Rudin	<b>Summary of Research Themes</b> <b>(Cybele Raver &amp; Sherry Glied)</b>
5:00 - 5:30	Rudin	<b>Collaboration Brainstorm</b>
5:30 - 6:30	Lobby	<b>Reception</b>

# PRESENTATION ROOM ASSIGNMENTS

## Round 1

Group	History, Narratives, and Storytelling	Sustainability & the Community	Health	Vulnerable Populations
<b>Room</b>	Murphy (2nd floor)	Rice (2nd floor)	Lafayette (3rd floor)	Mulberry (3rd floor)
<b>Presenters</b>	Mariela Alfonzo Neil Kleiman Jasmine Ma Harvey Molotch Claudio Silva Jonathan Soffer	Juan Pablo Bello Juliana Freire Cheryl Merzel Pamela Morris & Elise Cappella Jennifer Pomeranz Anne Rademacher & Mary Killilea	Emily Balcetis Jan Blustein Jane Carlton Dustin Duncan Eugenia Naro-Maciel Victor Rodwin	Kevin Cromar Kelly Doran Erica Foldy Priscilla Lopez Lorna Thorpe Beverly-Xaviera Watkins

## Round 2

Group	Safety & Resilience	Mobility	Local Politics	Education
<b>Room</b>	Murphy (2nd floor)	Rice (2nd floor)	Lafayette (3rd floor)	Mulberry (3rd floor)
<b>Presenters</b>	Shlomo Angel Masoud Ghandehari Marc Gourevitch Tae Hong Park Rae Zimmerman	Yu Chen Kristen Day Zhan Guo Constantine Kontokosta Debra F. Laefer	Gene Cittadino Andrew Goodman Anna Harvey Joshua D. Lee Raul P. Lejano Mitchell Moss	Fabienne Doucet Brian Elbel Keng-Yen Huang Leanna Stiefel Audrey Trainor

### **Mariela Alfonzo, PhD**

Research Assistant Professor  
NYU Tandon School of Engineering

#### **Show Me the Money: How Data-Driven Stories About the Economic Benefits of Place Can Boost Walkability**

The myriad benefits of an increasing demand for walkability are well-documented. But most U.S. cities are not walkable; numerous fiscal, bureaucratic, legal, and political hurdles stand in the way of improving walkability. Indeed, the typical, cash-strapped planning official often

has a lot of “convincing” to do around why these changes are warranted and faces much opposition. This presentation will show how data and predictive analytics can be used to quantify what people love about places, identify optimal improvements, and forecast the benefits of making them better to help make the (effective) case for great places.

### **Dr. Shlomo Angel**

Professor of City Planning and Director, NYU Urban Expansion Program  
The Marron Institute of Urban Management and the Stern School of Business

#### **Atlas of Urban Expansion—2016 Edition: Methodology and Key Results**

Using satellite imagery, we have identified the urban extents—the areas occupied by the built-up areas of cities and the urbanized open spaces they delimit—in a stratified global sample of 200 cities, a 5% sample of all 4,231 cities and metropolitan areas that had 100,000 people or more in 2010, for three time periods 1990, 2000, and 2010. This made it possible to identify, for the first time, the new urban peripheries, the urban areas built between 1990 and 2015, to measure them and to compare them with areas built before 1990, using high resolution satellite imagery. The presentation reports on the findings from the global sample of cities and their generalization to the universe of cities. The general conclusion reached by comparing the new urban periphery to areas built before 1990 is that, on the whole, there has been a significant deterioration in key parameters that measure the physical quality of the urban environment in cities the world over.

## **Emily Balcetis**

Associate Professor of Psychology  
NYU College of Arts and Science

### **Perception for Action: Improving Health and Empowering Leadership in Minority Populations**

On physical health, our research shows that the physical construction of low-income housing neighborhoods impacts exercise habits, but interventions targeting how people look at their environments can improve exercise. On leadership, we are examining racial minority children's beliefs about leadership potential; unlike adults, it seems that children believe the best leaders are those with darker, not lighter, skin.

## **Juan Pablo Bello**

Associate Professor, Music and Performing Arts Professions /  
Electrical and Computer Engineering  
Director, Music and Audio Research Lab (MARL)  
NYU Steinhardt

### **SONYC: A Cyber-Physical System for Monitoring, Analysis and Mitigation of Urban Noise Pollution**

Noise pollution is one of the topmost quality of life issues for urban residents, with proven effects on public health, educational outcomes, and the economy. The Sounds of New York City project (SONYC) is a new initiative that seeks to inject technological solutions into the cycle of noise pollution.

Our vision is that of a cyber-physical system integrating intelligent sensor networks capable of 24/7 noise monitoring in urban environments, data science solutions for the analysis of noise patterns at city scale, and the use of citizen science for motivating and coordinating the actions of the many humans in the loop towards the common goal of noise mitigation. This talk will present our vision, the progress that we have made to date, and the activities that we plan to pursue in the short- to mid-term.

### **Jan Blustein, MD, PhD**

Professor of Health Policy and Medicine  
NYU Wagner Graduate School of Public Service

#### **Cesarean Delivery in China's Cities and Supercities**

Starting as a primarily rural nation in the 1970's, China is now home to 17 supercities (cities with a population greater than 5 million). At the same time, the nation has devoted substantial resources to maternal and child health; even those living in the most rural areas have access to hospital care. We discuss the implications of urbanization for the rate of cesarean delivery. We focus on the high rates of cesarean delivery in the supercities (typically 45%), as well as some recent efforts to reduce those rates.

### **Jane Carlton, PhD**

Professor of Biology  
Director, Center for Genomics & Systems Biology  
NYU Department of Biology

#### **Mapping, Tracking, and Characterizing the Microbes in New York City**

Microbes live in every part of the biosphere, and are crucial to ecosystems and to human life. Funded by an NYU Grand Challenge grant and by the Alfred P. Sloan Foundation, we have used advances in environmental metagenomics to identify, characterize, and map microbial communities of New York. We have swabbed bicycle seats, ATM buttons, circulating paper currency, and analyzed raw sewage collected from all 14 wastewater treatment plants. Our current project analyzes samples from pets (cats and dogs) and pests (rats, cockroaches, and pigeons) in all five boroughs. These data are revealing intricate patterns and seasonal differences of the microbes in the city.

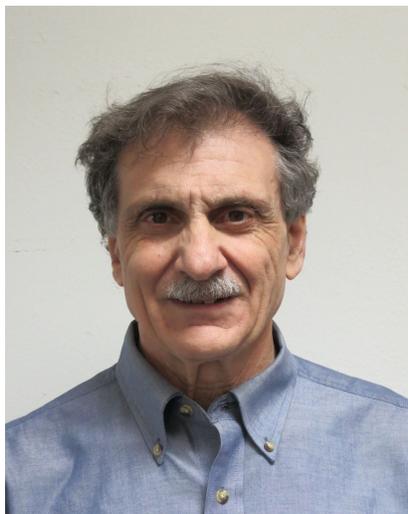

## **Yu Chen, PhD, MPH**

Associate Professor of Epidemiology  
Departments of Population Health and Environmental  
Medicine  
NYU School of Medicine

### **Association of Neighborhood Walkability with Physical Activity and Body Mass Index in the New York University Women’s Health Study**

Feasibility of constructing a neighborhood walkability index (NWI) using historical residential addresses and data is unknown. Using historical data, we determined NWI using baseline residential addresses of participants in the New York University Women’s Health Study (NYUWHS), a prospective cohort of 14,274 women recruited between 1985-1991 from the NYC Metropolitan Region. Relationships between NWI, body mass index (BMI), and physical activity at baseline were assessed, using a population average model and generalized estimating equations approach to control for potential confounders at the individual and neighborhood levels. NWI was positively and significantly related to walking and vigorous activity, and inversely related to BMI.

## **Gene Cittadino**

Clinical Associate Professor  
NYU Gallatin School of Individualized Study

### **Chicago, Henry Cowles, and the Emergence of Ecology**

I am an historian of science and environmental historian. In recently reviving an earlier research project on Henry Chandler Cowles, a major turn-of-the-twentieth-century pioneer of the science of ecology at the University of Chicago, I identified three significant links between the city of Chicago and Cowles’s ecological work: his religiously-motivated sympathies with the spirit of social reform among Chicago’s civic leaders, his personal connection with one of the founders of the Chicago school of sociology, and his familiarity with Chicago’s patchwork of neighborhoods and “natural areas” made accessible by the city’s vast network of streetcars and interurban railways.

## **Kevin Cromar, PhD**

Director, Air Quality Program  
Marron Institute of Urban Management

### **Opportunities for Improvement in Local Air Quality Management**

Despite indications of a general pullback on environmental regulations at the federal level, there remains significant opportunities at the state and local level for improving air quality. The Air Quality Program at the Marron Institute works directly with local policymakers to reduce the health impacts of air pollution through improved monitoring, quantification, and communication of health relevant levels of air pollution. Insights from our recent work, both domestically and

internationally, will be presented along with concrete suggestions for areas in which cities can take immediate action to better urban air quality.

## **Kristen Day**

Professor and Associate Dean of Academic Administration  
Department of Technology, Culture and Society  
NYU Tandon School of Engineering

### **Active Living in China**

China faces rising rates of overweight, obesity, and physical inactivity among its citizens. China is also urbanizing at a rapid rate. Current patterns of urban design and planning may exacerbate inactivity in China's major cities. This research examines urban environments and physical activity

in Shanghai and Hangzhou, and suggests directions for future research to better understand this relationship.

## **Kelly Doran, MD, MHS**

Assistant Professor, Departments of Emergency Medicine and Population Health  
NYU School of Medicine

### **Homelessness Prevention Among Urban Emergency Department Patients and Social Determinants of Health Registry**

Homelessness prevention interventions in NYC are effective, but do not reach most at-risk people. Emergency departments (EDs) serve a large, vulnerable group of people who may not access other social services. We are using multi-method cross-system data analysis to develop a brief screening tool to identify ED patients who are at significant risk for future homelessness. In addition, we are developing a novel “Social Determinants of Health (SDH) Registry” by linking ED patient surveys with the New York all-payer health care database. This SDH Registry will allow us to gain new knowledge about the influence of SDH on health outcomes.

## **Fabienne Doucet**

Associate Professor of Early Childhood Education  
Department of Teaching and Learning  
Affiliated Faculty of the Institute for Human Development and Social Change and the Metropolitan Center for Research on Equity and the Transformation of Schools

### **Fostering Culturally Relevant Play in Pre-K**

The purpose of the Fostering Culturally Relevant Play in Pre-K project is to design, implement, and study a professional development (PD) program for Pre-K teachers that fosters the development of culturally relevant play for young children in Pre-K. The PD program will center on a series of short documentaries, created as part of this proposed project, featuring teachers planning, implementing, and engaging in culturally relevant play with young children across settings. Documentaries will address key themes to which Pre-K teachers should attend in designing opportunities for culturally relevant play in their classrooms.

## **Dustin Duncan**

Assistant Professor  
Department of Population Health  
NYU School of Medicine

### **Perceived Neighborhood Safety is Associated with Poor Sleep Health Among Gay, Bisexual and Other Men Who Have Sex with Men in Paris, France**

No studies have examined associations of neighborhood characteristics and sleep health among men who have sex with men (MSM). The purpose of this study was to examine associations between perceived neighborhood safety and sleep health among a sample of MSM in Paris, France. We placed broadcast advertisements on a popular smartphone application for MSM in October 2016 to recruit users in the Paris (France) metropolitan area (n=580). In multivariate regression models, perceived neighborhood safety was associated with poor sleep quality, short sleep duration, and having sleep problems. Interventions to increase neighborhood safety may improve sleep health among MSM.

## **Brian Elbel, PhD, MPH**

Associate Professor of Population Health and Health Policy  
Department of Population Health, NYU School of Medicine  
NYU Wagner Graduate School of Public Service

### **The Food Environment and Childhood Obesity in NYC**

Using data on all NYC public school kids, we use census tract fixed effects to estimate the impact of the food environment (distance to nearest fast food location; wait service restaurant; corner store; supermarket) on childhood obesity.

## **Erica Gabrielle Foldy**

Associate Professor of Public and Nonprofit Management  
NYU Wagner Graduate School of Public Service

### **Walking Contradictions: Power, Inclusion and Employee Resource Groups**

Organizations tackling urban issues face numerous challenges related to inclusion of diverse employees, clients, residents, citizens and constituencies in the work. This theory paper draws on a range of research to argue that power is critical: without power, people are unlikely to feel included. It then suggests employee resource groups (or affinity groups) as one mechanism to increase power, but only if they meet certain conditions. They must be able to balance independence from management with integration into the organization. The paper concludes with propositions for enhancing both independence and integration.

## **Juliana Freire**

Professor, Data Science & Computer Science Engineering  
NYU Center for Data Science & NYU Tandon School of Engineering

### **Democratizing Urban Data Analytics**

Today, 50% of the world's population lives in cities and the number will grow to 70% by 2050. Cities are the loci of economic activity and the source of innovative solutions to 21st century challenges. At the same time, cities are also the cause of looming sustainability problems in transportation, resource consumption, housing affordability, and inadequate or aging infrastructure. The large volumes of urban data, along with vastly increased computing power open up new opportunities to better understand cities. Encouraging success stories show better operations, more informed planning, improved policies, and a better quality of life for residents. However, analyzing urban data often requires a staggering amount of work, from identifying relevant data sets, cleaning and integrating them, to performing exploratory analyses over complex, spatio-temporal data.

Our long-term goal is to enable domain experts to crack the code of cities by freely exploring the vast amounts of data cities generate. This talk describes challenges which have led us to fruitful research on data management, data analysis, and visualization techniques. I will present methods and systems we have developed to increase the level of interactivity, scalability, and usability for spatio-temporal analyses.

This work was supported in part by the National Science Foundation, a Google Faculty Research award, the Moore-Sloan Data Science Environment at NYU, IBM Faculty Awards, NYU Tandon School of Engineering and the Center for Urban Science and Progress.

## **Masoud Ghandehari**

Associate Professor  
NYU Tandon School of Engineering

### **Thirty Years After the Montreal Protocol**

Following the discovery of the Ozone hole in the 1970's, the Montreal Protocol led to near complete elimination of types of refrigerant gases responsible for that effect. The interim replacements (such as Freon), once known to be benign, are now considered to have four orders of magnitude higher global warming potential than CO<sub>2</sub>. In 2016, the Kigali accord signed by the same parties as the Montreal protocol, agreed to eliminate these compounds by 2020. Information on the sources and cycles of emissions of refrigerant gases are mainly derived from country reports of materials purchase and production. I will present results of an eight day spectroscopic imaging campaign, continuously mapping 8 kilometers of Manhattan's skyline once every 3 minutes. This study which lead to unprecedented phenomenology of refrigerant gas emissions is expected to appear in the Nature magazine this spring.

## **Andrew Goodman, MD, MPH**

Clinical Professor  
NYU College of Global Public Health

### **A Survey of Worksite Wellness Programs for New York City Hospital Workers**

An on-line worksite wellness survey, adapted from the Centers for Disease Control and Prevention Worksite Health Scorecard, was completed by 39 of 40 hospitals belonging to the League of Voluntary Hospitals in New York City. The median hospital score was 79 out of a possible 155 points. About half of the respondents had a budgeted worksite wellness program and 21% had dedicated staff. While over half had active wellness committees, only one-third had committees jointly chaired by the union and management. Program areas in need of improvement included healthy eating, physical activity supports, and stress reduction.

## **Marc Gourevitch, MD, MPH**

Professor and Chair, Department of Population Health  
NYU School of Medicine

### **Measurement as Tool for Urban Health Improvement**

Cities cannot manage what they cannot measure. A huge data gap regarding city-level indicators of health and health determinants impedes more focused health improvement efforts. In collaboration with 4 cities (Waco, Kansas City, Flint, Providence), we have developed and launched a publicly available online “city health dashboard” that responds to two key challenges: 1) most US health data is not readily available at the city level yet 80% of residents live in cities; and, 2) no standardized tools exist to help city leaders benchmark their communities’ performance on widely accepted indicators of health and its determinants.

## **Zhan Guo**

Associate Professor of Urban Planning and Transportation Policy  
NYU Wagner Graduate School of Public Service

### **Impact of Mandatory Affordable Housing on Housing Market in London**

This research analyzes the impact of the mandatory affordable housing regulation in London on three aspects of the housing market: supply of affordable housing units, number of developments subject to the regulation, and the total number of housing units. Key findings include: such mandates indeed increase the supply of affordable housing, but decrease the number of developments subject to the mandates, and have a negative but insignificant effect on the total number of housing units. The results suggest that such mandate might improve housing affordability in the short-term, but the long-term effect is unclear.

## **Anna Harvey**

Professor of Politics, Faculty of Arts and Science  
Interim Dean, Graduate School of Arts and Science  
Senior Research Scientist, The Policing Project at NYU Law

### **Democratic Policing**

The Policing Project at NYU Law, in partnership with the Laura and John Arnold Foundation and the Police Foundation, is launching a wide-ranging research project on the subject of Democratic Policing. We are interested in the broad social impacts of policing on communities, and in developing metrics that allow both policing agencies, and the communities they serve, to assess those impacts. We are currently working with

six jurisdictions, including several urban police districts, to assess the impacts of six discrete policing tactics, including body-worn cameras, ShotSpotter gunshot detection technology, de-escalation training, limited pursuit policies, crime analytics units, and stop/question/frisk policies.

## **Keng-Yen Huang**

Associate Professor  
Department of Population Health  
NYU Langone Medical Center

### **Integrating Mental Health in Diverse Community Settings**

The integration of preventive mental health services into primary and community settings has been advocated as a lower-cost public health solution to increase access of mental health services and improve community members' quality of life. However, systematic research on the applications of this integration model in urban planning or in high need communities is limited. Our Be-Well project attempts to address this issue by applying recent emerged implementation

science and integrated health service development models (e.g., community engagement) to develop and test new strategies to overcome resource and structural barriers, and improve related service access, support, and population mental health.

## **Constantine E. Kontokosta, PhD, PE**

Assistant Professor

Department of Civil and Urban Engineering Center for Urban Science and Progress (CUSP) and NYU Tandon School of Engineering

### **Urban Informatics and Participatory Sensing to Understanding the Nexus between Poverty, Health, and the Built Environment**

The Quantified Community (QC)—a long-term neighborhood informatics research initiative—is a network of instrumented urban neighborhoods that collect, measure, and analyze data on physical and environmental conditions and human behavior to better understand how neighborhoods and the built environment affect individual and social well-being. This research focuses on initial projects to deploy novel urban sensors in the economically-distressed communities of Red Hook and Brownsville, Brooklyn, to collect and analyze quality-of-life measurements at high spatial and temporal resolution. This effort is complemented by a citizen science initiative to engage local residents in the data collection and problem-solving process to drive evidenced-based community decision-making and improve local and city governance.

## **Debra F. Laefer**

Professor of Urban Informatics

Center for Urban Science and Progress

### **City-Scale Modeling v1.0**

City-scale modeling should be much more than a numerical model or a fancy three-dimensional visualization. What will be presented here is a comprehensive vision for an integrated spatial data tool that will host a wide range of text, image, and data in three dimensions in a manner that multiple researchers and stakeholders can both contribute and query the resulting compound datasets as well as supporting direct analysis. The critical elements of such a system will be presented herein.

## **Neil Kleiman**

Clinical Assistant Professor of Public Service  
NYU Wagner Graduate School of Public Service / Wagner  
Innovation Labs

### **Accessing Data for Urban Policy Analysis**

The use of data can change the way in which governments do business, and, in turn, change the environment for businesses. We describe the development of an approach that has enabled sensitive data from different sources to be discovered, integrated, and analyzed in a carefully controlled manner, and that has allowed city researchers and government staff to share analysis methods, results, and expertise in ways not possible before. We believe that our approach is resulting in a fundamental change in how data on human beings from governments, statistical agencies, research institutions, and other organizations, are made available for urban research.

## **Joshua D. Lee, MS, MSc**

Associate Professor  
Department of Population Health / Section on Tobacco Alcohol  
and Drug Use

### **Opioid Relapse Prevention at Release From NYC Jail**

We are conducting an N=255 RCT of XR-naltrexone vs. usual care and compared to a quasi-experimental cohort newly initiated on methadone maintenance in the NYC jails. Preventing opioid and other drug relapse following incarceration is a public health and overdose prevention priority.

## **Raul P. Lejano, PhD**

Associate Professor of Environmental Education  
NYU Steinhardt School of Culture, Education, and Human  
Development

### **Narrative and the City**

I am engaged in two relevant lines of research: The first is the role of narrative communication on fostering resilience to extreme weather events among urban poor. The second is the link between narrative, personal identity, and the city—i.e., how the meanings of the city intertwine with autobiography.

## **Priscilla Lopez**

Research and Evaluation Coordinator  
Department of Population Health  
NYU School of Medicine

### **Financial Barriers to Health Care and the Role of the Health Advocate Model**

Public housing residents face health system barriers like poor care coordination and difficulty navigating the healthcare system. There is evidence to suggest that low-income families with insurance struggle with unaffordable co-pays, insurance deductibles, and prescription drug costs, and have limited access to information about free/discounted medical care, child-care, and transportation to health care—resulting in unmet health needs. Thus, the NYC DOHMH launched a community health worker-health advocate intervention in East Harlem public housing units. This presentation will describe the barriers to care experienced by intervention participants and the wider East Harlem public housing population.

## **Jasmine Y. Ma**

Assistant Professor of Mathematics Education  
Department of Teaching and Learning  
NYU Steinhardt School of Culture, Education, and Human  
Development

### **Mapping Urban Youths' Learning Pathways**

This ethnographic study investigates urban youths' mathematical learning pathways across diverse settings, seeking new understandings of continuities and disjunctures they may experience as they participate in the many contexts that constitute their lives, including but not limited to school. The study is motivated by the conjecture that understanding and addressing educational inequity in mathematics education requires a more multi-sited approach than has typically characterized research in this area, an approach that takes into account the multiplicity of formal and informal settings in which mathematics learners spend their time, as well as the diverse pathways they chart across these settings.

## **Cheryl Merzel, DrPH, MPH, MS**

Clinical Associate Professor  
NYU College of Global Public Health

### **Smoking Cessation Among Latinos**

We examined smoking cessation among Latinos using data from the Hispanic Community Health Study/Study of Latinos, a population-based study of 16,415 Latinos ages 18-74 from Chicago, Miami, the Bronx, and San Diego. Findings indicated that the likelihood of quitting varied by national background among men, however, Puerto Rican and Cuban smokers of both genders were least likely to quit. Among women only, younger and more socially acculturated individuals had lower odds of sustaining cessation. Findings suggest that heterogeneity in smoking behaviors among Latinos should be taken into account when developing and delivering smoking cessation interventions and public health campaigns.

## **Harvey Molotch**

Professor of Sociology  
NYU Sociology

### **Consuming Abu Dhabi**

The rise of the “showcase” Gulf Cities, like Abu Dhabi, Dubai, and Doha, not only reconfigure parts of the Middle East landscape, they also challenge our prior understandings of how modern cities gain their shapes, sort their populations, and order their governance. In this paper, based primarily on the case of Abu Dhabi but drawing on other sites as well, I examine how such cities can operate when usual conditions of urbanism are not evident.

I inquire about presence or absence of such tried and true urban “forces” as industrial agglomeration, social capital, cultures of innovation and civic participation. I explain how substitutes or “work-arounds” help compensate for what otherwise would be deficiencies—including a lack of normal real estate markets.

The key work-around, one not given sufficient primacy in urban studies, is consumption. I work out how acquiring the goods—everyday as well as luxury goods—serves to bond citizens to the state as well as to one another. I also consider spectacles like architectural wonders, western museums, and institutions like NYU for their potential (somewhat mixed) to enhance stability or instability.

I try to “Learn from the Gulf” to discern possible emerging alternative patterns as they impact not only locally, but also development elsewhere.

### **Pamela Morris**

Vice Dean for Research and Faculty Affairs and Professor  
NYU Steinhardt

### **Elise Cappella**

Associate Professor of Applied Psychology and Director, Institute  
of Human Development and Social Change  
NYU Steinhardt

## **Strengthening the Architecture for High Quality Universal Pre-K: A University-District Partnership**

Based on research suggesting that early education is key to solving the problem of children's risk of academic failure, senior leaders in New York City (NYC) launched a policy initiative—Pre-K for All—to offer free, full-day, high quality pre-kindergarten to every NYC four-year-old child. Initial goals of our research-policy partnership were to enhance the research capacity of education policy partners and map the expansion of pre-kindergarten programs and seats around the city. Long-term goals involve understanding implementation of NYC early education programs and tracking program and child outcomes across the diversity of neighborhoods and children served.

## **Mitchell L. Moss**

Henry Hart Rice Professor of Urban Policy and Planning  
NYU Wagner Graduate School of Public Service

### **Urban Policy and Planning**

Streets and highways are vital for political protests; this research highlights the way in which highways, bridges and airports were the site of protests by Black Lives Matter in 2014-15, the women's protest marches of January 21, 2017, and protests towards immigration policies in 2017. Rather than occupy buildings or public parks, recent protest marches have taken over major public infrastructure—disrupting the flow of people and goods. There is now new pressure to adopt policies that will severely restrict protest activity on public arterials. This research will present data on protests in major cities and include maps of the major public infrastructure that has been occupied. Finally, we will identify the emerging efforts to limit the use of transportation systems for protest activity.

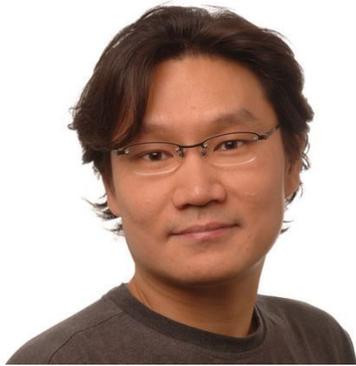

## **Eugenia (Genia) Naro-Maciel, PhD**

Clinical Assistant Professor of Liberal Studies  
NYU

### **Next Generation Environmental DNA Technology: Applications for Urban Ecology**

Environmental DNA (eDNA), or DNA sequenced directly from water, soil, or other mixed samples, represents a novel and transformative technology for assessing biodiversity. Next-generation high-throughput sequencing has numerous advantages, including furnishing voluminous data from readily available samples, such as water, and improving representation of cryptic or elusive organisms. Urban communities, however, remain relatively understudied in this new field. This presentation therefore aims to: 1) Provide an overview of eDNA; 2) Discuss our studies monitoring aquatic restoration in the Bronx River and on Staten Island; and 3) Offer suggestions for incorporating eDNA analysis into urban ecology research in New York City.

## **Tae Hong Park, PhD**

Associate Professor  
Director, Composition Program  
Faculty, Music Technology  
Department of Music & Performing Arts Professions

### **Citizen-Science-Driven Urban Sensing**

Citygram is a project that aims to capture, analyze, and visualize urban spatiotemporal energies in real-time to create maps—e.g. soundmaps and airmaps—which can ultimately inform and improve well-being of urbanites. The system is designed to enable effective and efficient rapid sensor network growth and make practicable, large spatial coverage through “edge compute” and citizen-scientist engagement. The project has developed into a collaboration and partnership with IBM and Weather Underground where the aim is to augment existing weather maps and render multimodal environmental maps for the public, policy-makers, and researchers.

## **Jennifer L. Pomeranz**

Assistant Professor and Interim Chair  
Department of Public Health Policy and Management  
NYU College of Global Public Health

### **Preemption: A Threat to Local Progress**

Preemption is when a higher level of government blocks the ability of lower levels of government to act. Although it applies equally to urban, suburban, and rural communities, it is more likely to negatively affect urban locations because they tend to be the ones to enact progressive legislation. There has been a surge in state preemption of local laws recently on topics as diverse as paid sick days, anti-discrimination, food policy, fire sprinklers, and firearm safety.

**Anne Rademacher**

Associate Professor  
Departments of Environmental Studies & Anthropology

**Mary Killilea**

Clinical Associate Professor of Biology  
Department of Environmental Studies

**Urban Greening Lab Initiative**

The Urban Greening Lab is a collaborative research and curricular design initiative. Our core faculty include two members of the Environmental Studies Department in New York, and faculty from NYU-Berlin. Our website reviews the major research and curricular projects underway through the Lab.

## **Victor G. Rodwin**

Professor of Health Policy and Management; Co-Director with Michael Gusmano of Rutgers U. School of Public Health, World Cities Project  
NYU Wagner Graduate School of Public Service

### **Cities and Health: The World Cities Project**

Although world cities—New York, London, Paris and Tokyo—consider themselves unique within their respective nations, because of the many characteristics they share in common, the World Cities Project (WCP) compares them to one another. WCP aims to identify promising practices and interesting failures and to suggest lessons from experience in wealthy nations. WCP has focused on three substantive areas: 1) urban aging; 2) emergency preparedness; and 3) the healthcare system. I propose to present some of our completed work on (3) and to discuss some research in progress on capital cities in BRIC nations: Brazil, Russia, India and China.

## **Claudio Silva**

Professor  
NYU Tandon School of Engineering and Center for Data Science

### **Analysis and Visualization of Urban Data**

Analyzing urban data often requires a staggering amount of work, from identifying relevant data sets, cleaning and integrating them, to performing exploratory analyses over complex, spatio-temporal data. Our long-term goal is to enable interdisciplinary teams to crack the code of cities by freely exploring the vast amounts of data cities generate. This talk describes challenges which have led us to fruitful research on data management, data analysis, and visualization techniques. I will present methods and systems we have developed to increase the level of interactivity, scalability, and usability for spatio-temporal analyses.

## **Jonathan Soffer**

Professor of History and Department Chair  
Department of Technology, Culture & Society  
NYU Tandon School of Engineering  
Affiliated Faculty Department of History

### **The Concept of Corruption in Urban History**

For the last sixty years, since Richard Hofstadter published *The Age of Reform*, historians, for a variety of reasons, have been minimizing, relativizing, and problematizing "corruption" out of our disciplinary vocabulary, particularly in the discipline of urban history. This trend coincided with the period of the strongest enforcement of anti-corruption in US history, from roughly 1900-1975. I will argue, that despite the moral content of the term, corruption is a useful term in understanding the degree of equality, and relative autonomy of the state that citizens enjoy.

## **Leanna Stiefel**

Professor of Economics and Education Policy  
NYU Wagner Graduate School of Public Service and NYU  
Steinhardt (IESP and ASH)

### **Special Education Policy in NYC**

Over 20% of NYC public school students receive special education services and yet we know little about the system wide patterns of disparities and outcomes. In this research, we look over time at progress of students with disabilities in NYC, with generalizations to other large city districts.

## **Lorna Thorpe, PhD**

Professor, Division of Epidemiology Director  
Department of Population Health  
NYU School of Medicine

### **New York City Health and Nutrition Survey (NYC HANES)**

New York City Health and Nutrition Examination Survey (NYC HANES) is a cross-sectional health examination survey of NYC adults conducted in 2004 and again in 2013-2014. Using a 3-stage cluster household sampling design, participants underwent a detailed health interview, physical exam, and gave biospecimens. This presentation will describe the data resource, including the biorepository, and give an overview of

key findings to date. Data are public use and biospecimens are available through a proposal process.

Development

### **Transition by Design: Improving Equity and Outcomes**

While there have been marked improvements in the adult lives of individuals with disabilities, post-school outcomes are not equitable across groups of students. For example, adolescents of color are more likely to face exclusionary discipline procedures in school resulting in detention and court involvement (known as the school-to-prison pipeline). These and other lost opportunities to learn limit access to inclusive education.

In this book-length research synthesis, *Transition by Design* (2017), I use a sociocultural theoretical lens and argue for a more contextualized, strengths-based, diversity-embracing approach to both research and practice to deliberately shape equitable opportunities for youth with disabilities in transition.

### **Academic Community Collaborative to Engage Stakeholders**

Low SES communities are generally resistant, almost impervious to the introduction of new information from outside their group because the ties among community members are strong—the result of close and stable interactions over time. In order to advance PCOR we need to build sustainable innovative mechanisms for

establishing weak ties within these communities; “local bridges” that create “ties between two persons that are the shortest (and often the only plausible) route by which information might travel from those connected to one to those connected to the other.” The ACCESS, online platform creates a virtual bridge for engaging diverse, hard to reach, socioeconomically disadvantaged, underrepresented communities in PCOR; and serves as a nexus for stakeholders—patients, caregivers, local, state and federal advocacy organizations, researchers, healthcare providers, payers, industry and policymakers to gather, share information, co learn, build trust and form partnerships.

### **Adapting Infrastructure Services for Extreme Weather Events**

The effects of extreme weather events and climate change on infrastructure services often compromise social conditions and necessities such as safety, livelihoods, and equity. This research draws from several projects pertaining to (1) the way infrastructure

services are interrelated in terms of spatial proximity and functional dependence that can increase vulnerabilities to users in extreme events, (2) the role of adaptation measures such as green infrastructure and its financing to reduce the vulnerability of infrastructure to flooding, and (3) the ability of transportation infrastructure in urban areas to enable residents and workers to access safe areas in extreme events.
